

PATENT  
10/023,407

### C. AMENDMENTS TO THE CLAIMS

In order to better assist the Examiner with the prosecution of the case, the current pending claims have been included in their entirety for which reconsideration is requested.

B<sup>2</sup> 1. (Currently Amended) A method for billing for telephone services, said method comprising:

receiving, from an origin device, a destination line number for processing a call;

loading a profile for a line subscriber of said destination line number, wherein said profile comprises a line subscriber billing plan for said destination line number; and

responsive to detecting an answer to said call at a destination device accessible via said destination line number, authenticating an identity of a callee receiving said call through a voice utterance provided by said callee;

replacing said line subscriber billing plan with a callee billing plan accessed according to associated with said authenticated identity of said callee, such that said call is processed according to said callee billing plan. ~~said callee receiving said call is billed for services requested by said callee for said call.~~

2. (Original) The method for billing for telephone services according to claim 1, wherein authenticating an identity of a callee further comprises:

authenticating said identity of said callee according to a voice utterance provided by said callee.

AUS920010839US1

5

PATENT  
10/023,407

3. (Original) The method for billing for telephone services according to claim 1, wherein authenticating an identity of a callee further comprises:

initiating authentication of said identity of said callee at said origin device.

4. (Original) The method for billing for telephone services according to claim 1, wherein authenticating an identity of a callee further comprises:

initiating authentication of said identity of said callee at an intermediary device processing said call.

5. (Original) The method for billing for telephone services according to claim 1, wherein authenticating an identity of a callee further comprises:

initiating authentication of said identity of said callee at said destination device.

6. (Currently Amended) The method for billing for telephone services according to claim 1, further comprising:

detecting an off-hook condition of said origin device at a service provider within an intermediary device;

initiating a register for said call;

determining a destination service provider within said intermediary device responsible for service of said destination line number;

switching said call to said destination service provider;

AUS920010839US1

6

PATENT  
10/023,407

establishing a destination register for said call with said destination service provider;

loading a destination line subscriber profile associated with said destination line number into said destination register, wherein said destination line subscriber profile comprises a billing plan for a destination line subscriber;

extending said call to said destination device; and

BZ  
in response to receiving a callee profile associated with said identity of said callee, wherein said callee profile comprises said a callee billing plan, replacing said destination line subscriber profile in said destination register with said callee profile, ~~such that billing for service provided for said call is directed to said callee.~~

7. (Original) The method for billing for telephone service according to claim 1, further comprising:

controlling at least one particular service provided for said call according to said at least one particular service selected in a callee profile accessible according to said authenticated identity of said caller.

8. (Original) The method for billing for telephone services according to claim 1, further comprising:

transferring said call to a service provider associated with said destination line number.

9. (Original) The method for billing for telephone services according to claim 1, further comprising:

AUS920010839US1

7

PATENT  
10/023,407

billing said callee for an order placed with a caller at said origin device according to said callee billing plan.

10. **(Currently Amended)** A system for billing for telephone services, said system comprising:

means for receiving, from an origin device, a destination line number for processing a call;

means for loading a profile for a line subscriber of said destination line number, wherein said profile comprises a line subscriber billing plan for said destination line number; and

means responsive to detecting an answer to said call at a destination device accessible via said destination line number, for authenticating an identity of a callee receiving said call; and

means for replacing said line subscriber billing plan with a callee billing plan accessed according to ~~associated with~~ said authenticated identity of said callee.

11. **(Original)** The system for billing for telephone services according to claim 10, wherein said means for authenticating an identity of a callee further comprises:

means for authenticating said identity of said callee according to a voice utterance provided by said callee.

12. **(Original)** The system for billing for telephone services according to claim 10, wherein said means for authenticating an identity of a callee further comprises:

AUS920010839US1

8

PATENT  
10/023,407

means for initiating authentication of said identity of said callee at said origin device.

13. (Original) The system for billing for telephone services according to claim 10, wherein said means for authenticating an identity of a callee further comprises:

means for initiating authentication of said identity of said callee at an intermediary device processing said call.

14. (Original) The system for billing for telephone services according to claim 10, wherein said means for authenticating an identity of a callee further comprises:

B2  
means for initiating authentication of said identity of said callee at said destination device.

15. (Currently Amended) The system for billing for telephone services according to claim 10, further comprising:

means for detecting an off-hook condition of said origin device at a service provider within an intermediary device;

means for initiating a register for said call;

means for determining a destination service provider within said intermediary device responsible for service of said destination line number;

means for switching said call to said destination service provider;

AUS920010839US1

9

PATENT  
10/023,407

means for establishing a destination register for said call with said destination service provider;

means for loading a destination line subscriber profile associated with said destination line number into said destination register, wherein said destination line subscriber profile comprises a billing plan for a destination line subscriber;

means for extending said call to said destination device; and

means responsive to receiving a callee profile associated with said identity of said callee, wherein said callee profile comprises said a callee billing plan, for replacing said destination line subscriber profile in said destination register with said callee profile, ~~such that billing for service provided for said call is directed to said callee.~~

16. (Original) The system for billing for telephone service according to claim 10, further comprising:

means for controlling at least one particular service provided for said call according to said at least one particular service selected in a callee profile accessible according to said authenticated identity of said caller.

17. (Original) The system for billing for telephone services according to claim 10, further comprising:

means for transferring said call to a service provider associated with said destination line number.

AUS920010839US1

10

PATENT  
10/023,407

18. (Original) The system for billing for telephone services according to claim 10, further comprising:

means for billing said callee for an order placed with a caller at said origin device according to said callee billing plan.

19. (Currently Amended) A computer program product for billing for telephone services, said computer program product comprising:

a recording medium;

means, recorded on said recording medium, for enabling receipt of a destination line number for processing a call;

means, recorded on said recording medium, for loading a profile for a line subscriber of said destination line number, wherein said profile comprises a line subscriber billing plan for said destination line number; and

means, recorded on said recording medium, for authenticating an identity of a callee receiving said call; and

means, recorded on said recording medium, for controlling replacement of said line subscriber billing plan with a callee billing plan accessed according to ~~associated with~~ said authenticated identity of said callee.

20. (Original) The computer program product for billing for telephone services according to claim 19, further comprising:

AUS920010839US1

11

PATENT  
10/023,407

means, recorded on said recording medium, for authenticating said identity of said callee according to a voice utterance provided by said callee.

21. (Original) The computer program product for billing for telephone services according to claim 19, further comprising:

means, recorded on said recording medium, for initiating authentication of said identity of said callee at said origin device.

22. (Original) The computer program product for billing for telephone services according to claim 19, further comprising:

B<sup>2</sup>  
means, recorded on said recording medium, for initiating authentication of said identity of said callee at an intermediary device processing said call.

23. (Original) The computer program product for billing for telephone services according to claim 19, further comprising:

means, recorded on said recording medium, for initiating authentication of said identity of said callee at said destination device.

24. (Original) The computer program product for billing for telephone services according to claim 19, further comprising:

means, recorded on said recording medium, for detecting an off-hook condition of said origin device at a service provider within an intermediary device;

means, recorded on said recording medium, for initiating a register for said call;

AUS920010839US1

12

PATENT  
10/023,407

means, recorded on said recording medium, for determining a destination service provider within said intermediary device responsible for service of said destination line number;

means, recorded on said recording medium, for switching said call to said destination service provider;

means, recorded on said recording medium, for establishing a destination register for said call with said destination service provider;

B2 ✓  
means, recorded on said recording medium, for loading a destination line subscriber profile associated with said destination line number into said destination register, wherein said destination line subscriber profile comprises a billing plan for a destination line subscriber;

means, recorded on said recording medium, for extending said call to said destination device; and

means, recorded on said recording medium, for replacing said destination line subscriber profile in said destination register with a callee profile associated with said identity of said callee.

25. (Original) The computer program product for billing for telephone service according to claim 19, further comprising:

means, recorded on said recording medium, for controlling at least one particular service provided for said call according to said at least one particular service selected in a callee profile accessible according to said authenticated identity of said caller.

AUS920010839US1

13

PATENT  
10/023,407

26. (Original) The computer program product for billing for telephone services according to claim 19, further comprising:

means, recorded on said recording medium, for transferring said call to a service provider associated with said destination line number.

27. (Original) The computer program product for billing for telephone services according to claim 19, further comprising:

means, recorded on said recording medium, for billing said callee for an order placed with a caller at said origin device according to said callee billing plan.

B<sup>2</sup>  
28. (Original) A method for callee specified telephone service, comprising:

receiving an authenticated identity for a callee answering a call placed to a destination device;

accessing a billing plan for said authenticated identity of said callee; and

loading said billing plan for specifying charges for said call, such that telephone service billed to said callee is accessible at a plurality of destination devices.

29. (Original) The method for callee specified telephone service according to claim 28, wherein accessing a billing plan further comprises:

accessing said billing plan according to said authenticated identity from at least one data storage system within a trusted telephone network.

AUS920010839US1

14

PATENT  
10/023,407

30. (Original) The method for callee specified telephone service according to claim 28, wherein accessing a billing plan further comprises:

accessing said billing plan according to said authenticated identity from at least one data storage system outside a trusted telephone network, wherein a secure communication channel is established between said trusted telephone network and said at least one data storage system outside said trusted telephone network.

31. (Original) A system for callee specified telephone service, comprising:

a billing controller enabled in a server system;

means for receiving an authenticated identity for a callee answering a call placed to a destination device;

means for accessing a billing plan for said authenticated identity of said callee; and

means for loading said billing plan for specifying charges for said call at said billing controller, wherein said telephone service billed to said callee is accessible at a plurality of destination devices according to said billing plan.

32. (Original) The system for callee specified telephone service according to claim 31, wherein said means for accessing a billing plan further comprises:

means for accessing said billing plan according to said authenticated identity from at least one data storage system within a trusted telephone network.

AUS920010839US1

15

PATENT  
10/023,407

33. (Original) The system for callee specified telephone service according to claim 31, wherein said means for accessing a billing plan further comprises:

means for accessing said billing plan according to said authenticated identity from at least one data storage system outside a trusted telephone network, wherein a secure communication channel is established between said trusted telephone network and said at least one data storage system outside said trusted telephone network.

34. (Original) A computer program product for callee specified telephone service, comprising:

B2  
a recording medium;

means, recorded on said recording medium, for enabling receipt of an authenticated identity for a callee answering a call placed to a destination device;

means, recorded on said recording medium, for enabling access to a billing plan for said authenticated identity of said callee; and

means, recorded on said recording medium, for loading said billing plan for specifying charges for said call.

35. (Original) The computer program product for callee specified telephone service according to claim 34, further comprising:

means, recorded on said recording medium, for enabling access to said billing plan according to said authenticated identity from at least one data storage medium within a trusted telephone network.

AUS920010839US1

16

PATENT  
10/023,407

36. (Original) The computer program product for callee specified telephone service according to claim 34, further comprising:

means, recorded on said recording medium, for enabling access to said billing plan according to said authenticated identity from at least one data storage system outside a trusted telephone network, wherein a secure communication channel is established between said trusted telephone network and said at least one data storage system outside said trusted telephone network.

Claims 37-45 (previously cancelled).

Claim 46 (cancelled)

47. (Original) A method for controlling billing transactions, comprising:

receiving a billing request from a caller during a call, wherein said billing request comprises an authenticated callee identity and callee account provider identifier; and

accessing payment for said billing request from said callee account provider according to said authenticated callee identity.

48. (Original) The method for controlling billing transactions according to claim 47, further comprising:

transferring said payment to a caller account provider according to an authenticated caller identity.

AUS920010839US1

17

PATENT  
10/023,407

49. (Original) The method for controlling billing transactions according to claim 47, wherein said billing request comprises a request for a fund transfer from said callee to said caller.

50. (Original) The method for controlling billing transactions according to claim 47, wherein said billing request comprises a request for a fund transfer from said callee to said caller for a purchase by said callee from said caller.

51. (Original) The method for controlling billing transactions according to claim 47, wherein said billing request is received at a billing service executing within a trusted telephone network processing said call.

52. (Original) The method for controlling billing transactions according to claim 47, wherein said billing request is received at a billing service executing outside a trusted telephone network processing said call via a secure channel to said trusted telephone network.
